DETAILED ACTION

Allowable Subject Matter

1. The following is an examiner's statement of reasons for allowance:

The examiner deems Kato (US 6,396,874) to be the closest prior art of record. Kato discloses a picture data reproducing apparatus which reproduces compressed picture data recorded to a recording medium according to the MPEG standard, the apparatus comprising:

- a storage means for storing compressed picture data read from a recording medium (2 of Fig. 3);
- a read control means for sequentially reading compressed picture data stored in the storage means on the basis of STC_d generated by the STC generating means (readout control of Fig. 3); and
- a decoding means for decoding the compressed picture data read by the read control means to generate picture data for display (10 of Fig. 3);

The prior art also teaches an STC generator for generating STC (37a of Fig. 11), but the prior art does not disclose, suggest, or teach that the STC generator generates, for a normal-speed reproduction, STC (STC_d) sequentially from a set initial value, wherein the STC (STC_d) is delayed a fixed time (System_delay) from STC (STC_medium) of the compressed picture data read from the recording medium; and sets, at shift from a variable-speed reproduction to normal-speed reproduction, the initial value on the basis of a result of comparison between PTS (PTS_s) of the display picture

data at the shift and STC_medium at the shift-(amount of delay due to the shift (shift_delay)+System_delay).

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
